                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAIS7798-AAI61369) and the invention relates to human nucleic acids (AAIS798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous soft of the invention may be used to treat diseases, such as localised neuropathies and central nervous system diseases, such as laterial sclerosis, and Shy-Drager Sydrome. Other uses include the utilisation of the activities such as Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and consider the sequence data for this patent did not form part of the printed

```
This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence encodes a polypeptide described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   153

Dipid-associated proteins (LIPAP) can be used for treating or preventing disorders associated with decreased expression of LIPAP, or screening for agonists or antagonists of LIPAP, and to raise specific antibodies. Antagonists and antagonists of LIPAP are useful for treating diseases associated with reduced or increased levels of LIPAP, e.g. cardiovascular, neurological and gastrointestinal diseases and disorders of lipid metabolism. Fragments of the nucleic acid encoding LIPAP are useful for detection of full length coding sequences, in hybridization and/or amplification assays or for diagnosis or monitoring. Nucleotides encoding LIPAP are used to screen for compounds that specifically modify LIPAP expression, for recombinant production of LIPAP, in gene therapy, as a source of therapeutic antisense, triplex-forming, or ribozyme agents and for therapeutic mapping. Antibodies to the proteins are used for diagnosis and monitoring of LIPAP-associated disease by immunoassay, as an antification of natural LIPAP. Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -

Claim 5; Page 4578-4580; 5507pp; English.

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; catipatic; antiponvulsant; antiathritic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthiitis, graft vs host disease, cardiovacular disease, diabetes mellitus, dyraft vs host disease, cardiovacular disease, diabetes mellitus, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antinflammatory disease; to enhance combined immunodesis; and as a contraceptive.

The specification also describes EPLIN-alpha. EPLIN is a tumour suppressor protein, whose expression is altered in multiple common human tumour types. EPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to used in screening assays to detect molecules that specifically bind to as agonist or antagonist of EPLIN, in particular molecules that affect cell proliferation. Thus the assays are useful for screening molecules with potential ultility as anticancer drugs or lead compounds for drug development. EPLIN nucleic acids, proteins are useful for detecting a cell proliferative disorder in a subject. EPLIN polynucleotides are useful in gene therapy techniques. EPLIN is useful as a marker that

EPLIN is a tumour suppressor protein, whose expression is altered in multiple common human tumour types. EPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to EPLIN nucleic acids, proteins or derivatives and thus have potential use as agonist or antagonist of EPLIN, in particular molecules that affect as agonist or antagonist of EPLIN, in particular molecules that affect with potential utility as anticancer drugs or lead compounds for drug development. EPLIN nucleic acids, proteins are useful for detecting a cell proliferative disorder in a subject. EPLIN polymucleotides are useful in gene therapy techniques. EPLIN is useful as anxier that can be diagnostically, prognostically and therapeutically used over the course of a cell proliferative disorder associated with EPLIN. \$8888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                215
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      235
The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human high agnostances of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          483
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               543
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           255

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypetides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's diseases, amyotrophic utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and crows of storicy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                          Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1713 BP; 549 A; 401 C; 417 G; 346 T; 0 other;

The present invention describes primer sets for synthesising 5602 (11)-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary comprises at least 15 mollocides of complementary or to the complementary strand of a polynucleotides, or (b) a compliance of an oligonucleotide comprises a reast 15 mollocides, or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence on an oligonucleotide comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence of complementary to a polynucleotide which comprises at 3'-end sequence. Where the oligonucleotide which comprises at 3'-end sequence, where the combination of the specification. The primer set selected from those defined in the specification. The primer set can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for AAH1363 and AAH13631 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to Febresent cligonucleotides, all of which are used in the exemplification of the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LysGlyAsnTyrAspGluGlyPheGlyHisArgProHisLysAspLeuTrpAlaSerLys 468

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes novel human nucleic acid sequences from normal breast tissue which have cytostatic activity. The nucleic acid sequences can be used to produce and isolate full-length gene sequences. They can be used to express proteins, which can be used as tools to find an activity against breast cancer. The sequences can be used in sense or antisense form. They are especially useful for medicaments for gene therapy to treat breast cancer and for treating illnesses associated with fat metabolism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel human sterol regulatory element binding protein 3 (hSREBP-3) expressed in human normal hypothalamic tissue and protein and sequence. Also described is the process for preparing the protein and nucleic acid sequence, and the method for detecting hSREBP-3 nucleic acid sequence and polypeptides. The present sequence represents the coding sequence of human hSREBP-3 as described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SerLeuSerGluserSerProProLysalaMetLysEysPheGlnAlaProAlaArgGlu 388

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1387
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            709
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1447
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 729
```

The polynucleotide sequences given in AAC59449 to AAC59497 encode the human secreted proteins given in AAB3402 to AAB34140. AAB34141 to AAB34216 represent human secreted polypeptide sequences and proteins composed to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissue and cells the genes are expressed in. Examples of activities include: and cells the genes are expressed in. Examples of activities include: contained invention; immunosuppressive; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; cerebroprotective; nootropic; cerebroprotective; and vulnerary. The polynucleotides and polypeptides can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, cand vulnerary. The polynucleotides and polypeptides can be used to pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases, hyperproliferative disorders e.g. neoplasms or cancer of the breast or liver, cardiavascular disorders, infections caused by chacteria, viruses and fungi and ocular disorders. The polypeptides can also be the breast or and fungi and ocular disorders. The polypeptides can also be the breast or and the disorders and polypeptides can also be the breast or liver, cardiavascular disorders, infections caused by the bacteria, viruses and fungi and ocular disorders. The polypeptides can also be the breast or and the breast or and contain and coular disorders.

Polynucleotide sequences AAC93479 - AAC93527 represent cDNA encoding human secreted proteins AAB51827 - AAB51875. Sequences AAB51876 - AAB51875 - Sequences AAB51876 - CAAB51927 represent alternative polypeptides encoded by the genes, and amino acid sequences with which they share homology. The genes and care expressed. Examples of their activities include immunosuppressive; car entratritic; antitheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nototropic; neuroprotective; antibacterial; vasotropic; cerebroprotective; nototropic; neuroprotective; antibacterial; vasotropic; cerebroprotective; nototropic; neuroprotective; antibacterial; vasotropic; cerebroprotective; nototropic; neuroprotective; antibacterial; creating; preventing and/or diagnosing diseases and disorders such as proteins, polynucleotides, antagonists and agonists may be useful in treating; preventing and/or diagnosing diseases and disorders e.g. neoplasms of the breast or liver; cardiovascular disorders caused by bacterial, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound culture of primary tissues, to regenerate tissues and in chemotaxis. The culture of primary tissues, to regenerate tissues and in chemotaxis. The collypeptides can also be used as a food additive or preservative to concern contranted minarals conference and other minarals minarals conference and other minarals.
